

FOREX CARGO

Scheduling System

Client Project Brief

A practical internal system for organizing pickups, deliveries, staff assignments, and daily schedules.

PREPARED FOR	Forex Cargo, Kingdom of Bahrain
DOCUMENT PURPOSE	Project scope and proposed operating workflow
DATE	11 July 2026

CONFIDENTIAL - FOR CLIENT REVIEW

1. Project Overview

Forex Cargo requires a simple and reliable internal scheduling system to organize customer pickup and delivery bookings. The system will replace scattered notes, manual lists, and difficult follow-ups with one shared schedule that authorized staff can access from office computers and mobile devices.

Primary Goal

Give office staff and salespersons a clear, up-to-date view of every assigned pickup or delivery, while improving accountability, customer service, and daily coordination.

What the proposed system will achieve

- Record pickup, delivery, and special customer requests in one place.
- Automatically connect a booking to the assigned salesperson.
- Allow staff to find schedules quickly using search and filters.
- Provide clear printable daily and date-range schedules.
- Notify salespersons when a new schedule is assigned to them.
- Maintain customer contact information for faster repeat bookings.
- Keep a clear record of who created and updated each schedule.

System format

The system will be delivered as a secure web application that can be opened in a normal browser and installed on compatible office computers and mobile devices for convenient access. The first version is intended for internal Forex Cargo operations, not for public customer self-booking.

At a glance

Primary users	Admin, Office Staff, and Salespersons
Access	Secure login from supported computers and mobile devices
Main output	Shared live schedule plus filtered printable reports
Customer contact	Phone booking with optional email confirmation
Daily control	Assignment, status tracking, notes, and activity history

2. Proposed Booking Workflow

The booking process is designed to match how Forex Cargo currently receives customer calls, while making the information more organized and easier to distribute to the responsible salesperson.

Step	Action	Result
1	Customer calls Forex Cargo	An office staff member receives the booking request by phone.
2	Booking type is selected	The request is recorded as Pickup, Delivery, or Custom.
3	Customer information is entered	The staff member searches by contact number or creates a new customer record.
4	Schedule details are confirmed	The date, assigned salesperson, service details, and special instructions are recorded.
5	Schedule is saved and assigned	The booking becomes visible to the assigned salesperson.
6	Salesperson receives notification	A notification alerts the salesperson that a new schedule has been assigned.
7	Status is updated	The booking remains Pending until it is marked Completed or Cancelled.

Booking information

Field	Purpose
Service category	Pickup, Delivery, or Custom
Service details	Manual description of the requested pickup or delivery
Contact number	Searchable and suggested from previous customer records
Customer name	Automatically filled when an existing customer is selected, but still editable
Address	Automatically filled when available, but still editable
Email address	Optional; used when a booking confirmation should be sent
Scheduled date	Displayed clearly, for example: Monday, 13/07/2026
Assigned salesperson	Selected from the active salesperson list
Notes and preferences	Special instructions, timing preferences, quantities, or other details
Booked by	Automatically records the office staff member who created the schedule
Status	Pending, Completed, or Cancelled

3. Staff Access and Responsibilities

Each employee will only see and manage the information needed for their work. This helps protect customer information and prevents accidental changes to another employee's responsibilities.

Role	Main responsibilities	Key limitations
Admin	Manage office staff and salesperson accounts; view and manage all schedules; search, print, and oversee operations.	Cannot be replaced by ordinary staff; account and role changes remain controlled.
Office Staff	Receive calls; create and update bookings; assign salespersons; manage customer details; search and print schedules.	Cannot manage employee roles or administration settings.
Salesperson	View assigned schedules; update progress and completion notes; create and manage schedules they personally add; print their own schedule.	Cannot edit or delete protected booking details created by office staff, and cannot access another salesperson's schedule list.

Accountability

The system will record who created or updated a schedule. Important changes, cancellations, and reassignments will remain traceable for management review.

4. Included Features

Customer directory and quick autofill

- Search existing customers using their contact number.
- Automatically fill the saved name, address, and email.
- Allow staff to edit the details for the current booking.
- Preserve the customer information used at the time of each booking.

Schedule management

- Create pickup, delivery, and custom schedules.
- Assign or reassign an active salesperson.
- Update dates, notes, and booking information based on staff permission.
- Mark schedules as Pending, Completed, or Cancelled.
- Keep cancelled records instead of permanently losing important history.

Search and filtering

- Search using customer name or contact number.
- Filter by single date or date range.
- Filter by salesperson, booking type, status, or booked-by employee.
- Use combined filters to prepare daily operational lists.

Printing

- Print today's schedule, a selected date, or a date range.
- Print schedules for one salesperson or employee.
- Use a clear table format with spacious rows and a remarks area for handwriting.
- Show the selected filters and print date on the report.

Notifications and confirmations

- Notify a salesperson when a new schedule is assigned.
- Notify the new salesperson when a booking is reassigned.
- Provide in-system notifications and supported mobile/desktop alerts.
- Optionally send a booking confirmation to a customer when an email address is provided.

Sample printed schedule structure

Date	Customer	Contact	Service	Salesperson	Status	Remarks
13/07	Sample Customer	3XXXXXXX	Pickup - 3 boxes	Salesperson A	Pending	
13/07	Sample Customer	3XXXXXXX	Delivery - empty boxes	Salesperson B	Pending	

5. Expected Business Benefits

Faster booking	Repeat customers can be located quickly, reducing repeated data entry during phone calls.
Clear ownership	Every schedule clearly shows the assigned salesperson and the employee who booked it.
Fewer missed schedules	Salespersons receive timely assignment notifications and can view their own schedule from supported devices.
Better daily coordination	Office staff and management work from one shared and current schedule.
Professional records	Searchable history and printable reports replace scattered handwritten notes and messages.
Improved customer service	Accurate booking details and optional email confirmation reduce misunderstandings.
Safer information handling	Employee access is limited according to job responsibility.

How success can be measured

- Office staff can create and find a customer booking quickly during a phone call.
- Each active schedule has a clear assigned salesperson and current status.
- Salespersons can review their daily assignments without relying on separate messages or paper notes.
- Management can produce an accurate daily or date-range printout using the required filters.

6. Proposed Initial Release Scope

The first release will focus on the complete internal scheduling workflow needed for daily operations. Additional features can be added later after Forex Cargo staff have used the core system and confirmed their priorities.

Included in the initial release

- Secure employee login and role-based access.
- Employee account management for Admin users.
- Customer records and contact-number suggestions.
- Pickup, Delivery, and Custom booking creation.
- Salesperson assignment and schedule visibility.
- Status and completion-note updates.
- Search, filters, and schedule history.
- Printable daily, filtered, and date-range schedules.
- Salesperson assignment notifications.
- Optional customer booking confirmation by email.
- Mobile-friendly and desktop-friendly layout.
- Basic activity history for important actions.

Not included in the initial release

- Public customer self-booking website or customer accounts.
- Online payments, invoices, or accounting integration.
- Live vehicle GPS tracking or route optimization.
- Warehouse inventory and box-stock management.
- WhatsApp automation or SMS messaging.
- Advanced payroll, attendance, or commission management.
- Integration with existing third-party cargo or shipping platforms unless separately agreed.

Controlled Expansion

The system will be structured so that approved features such as WhatsApp notifications, customer booking, route planning, or inventory can be considered in future phases without overcomplicating the first release.

Project delivery approach

Development will be completed in controlled stages. Each stage will be planned, reviewed, tested, and approved before moving to the next major function. This reduces the risk of building the wrong workflow and gives Forex Cargo the opportunity to confirm that the system matches real office operations.

Stage	Focus	Client-visible outcome
1	Requirements and workflow confirmation	Approved booking process, roles, terminology, and project scope.
2	System foundation and staff access	Secure login and account permissions.
3	Customers and schedules	Working customer directory and complete booking workflow.
4	Search and printing	Fast operational search and professional printable schedules.
5	Notifications and confirmations	Assignment alerts and optional customer email confirmation.
6	Testing and launch	Staff review, corrections, production setup, and handover.

7. Client Inputs and Responsibilities

To ensure that the finished system accurately reflects Forex Cargo operations, the client will provide or confirm the following during the planning and review stages:

- Final list of active salespersons, office staff, and Admin users.
- Preferred wording for booking types, status labels, and printed reports.
- Any required customer email wording and official contact details.
- Company logo and preferred brand colors when available.
- Sample current schedule sheets or printed formats, if any.
- Confirmation of which customer information should be retained and for how long.
- Staff participation in testing and approval before launch.

Operational assumptions

- The initial system is for internal Forex Cargo staff use.
- Staff will have reliable internet access when creating or updating schedules.
- Notifications depend on the employee allowing notifications on a supported device or browser.
- Email confirmation delivery depends on a configured business email service.
- Any future paid third-party service will be discussed and approved before activation.
- The final timeline and commercial quotation will be based on the approved requirements and review cycle.

8. Acceptance Summary

The proposed scheduling system will provide Forex Cargo with a single, organized platform for customer bookings, salesperson assignments, schedule tracking, searching, printing, and notifications. The project will be developed in reviewed stages so that the final workflow remains practical for daily office use.

Recommended Approval
Approve the initial project scope and proceed to detailed workflow confirmation before implementation begins.
